

Highly efficient water conserving nozzle for taps.

Note:

This device has been designed for taps with aerator systems of standard size, please ensure that the tap size is correct before installation. The instructions for installation can be found in the booklet. Video instructions are also available for better understanding.

To change modes, gently rotate the cap in anticlockwise direction. Handle the nozzle with care. Do not remove the cap except for when cleaning. Do not tamper with or remove the inner O-ring present inside the nozzle. This nozzle works ideally in houses with pressure pump systems.

WARRANTY

If the product is defective or unsatisfactory, you may return the product to the place of purchase. Kindly make sure to provide a copy of the invoice upon returning the product.

QuaMist nozzle comes with a one-year warranty. The warranty applies only if the nozzle has been correctly installed and used. The warranty does not cover the damages due to mishandling or functional defects that arise due to the impurities in the water. A filter unit attached to the washer can be found in the package, but we strongly recommend to use a common water filter for better results.

CLEANING AND MAINTENANCE

Use only a soft damp cloth to clean the cap. Remove the cap and clean the inner nozzle with soap. Do not use abrasives, harsh wool, or harsh cleansers on the product. Tooth picks can be used to clean the holes if there are impurities present inside. **DO NOT TURN ON THE TAP WITHOUT THE CAP.** If lime deposits are found on the nozzle, use vinegar diluted with water and use a sponge to gently remove it. If your house is not equipped with filtration system, it is advisable to remove the sediments on the filter that's attached at the top. It can be cleaned by simply washing the filter. It is recommended that you to clean the QuaMist Nozzle once every two months for best results.

If the washer does not fit well or if it is too loose, you can use the washer that comes with your old aerator. Kindly ensure that you clean your nozzle once every four weeks as sediments may settle in the nozzle (if you don't have a water filter installed).

Donts

- Do not remove the cap from the nozzle, except for when cleaning.
- Do not turn on the tap without the cap. This will result in water spraying on the opposite direction.
- Do not turn the cap extremely anticlockwise when the tap is running.
- Do not tamper with the O-ring and washer.
- Don't fix the nozzle to the tap without the washer (this will result in leaking).

Installation procedure and additional information can be found on our website. (Installation video included)

Tested for pressurised system up to 1.5 bar.

Not suitable for houses without pressure pumps.

Why do you need this ?

Protecting our eco system from further damage is critical. Moving water from one place to another uses energy sources. Saving water not only saves energy, it saves lives as well.

Water conservation is not a job that is restricted to scientists, city planners and engineers. It is our responsibility to take conservation into our own hands.

Every small change ultimately results in a big impact.

On an average, one individual can end up using upto 150 litres, per day. Washing your hands under running water can use up to 3 litres per wash. With QuaMist Nozzle, only a third of that will be consumed - resulting in saving 95% of water.

It can be difficult being mindful of the amount of water we waste, so let QuaMist Nozzle do it for you!

Savings

AERATORS	LITERS/MIN	SAVINGS
STANDARD	20 ltrs.	0%
STANDARD SAVING	12 ltrs.	0%
EXTREME SAVERS	3 ltrs.	75%
QuaMist JET MODE	1 Ltr	85%
QuaMist- MIST MODE	550 ml	95%

NOTE - Tests were performed with a standard pressure of 2 bar. Discharge rates might vary.
